

I don't see how relaxing the rules for the broadband over the power-line system in the United States, can possibly not be harmful to Public Safety radio services, Broadcasters of all stripes, and Amateur Radio.

It will probably, if the Japanese experiments of several years ago are accurate, significantly disrupt important communications of government agencies at all levels, transportation services, utilities, LORAN, WWV, aircraft communications (its still AM, you know), and a host of other communications too numerous to mention.

Please don't relax the rules! Thanks for your consideration.
